6 /**
7  * @dev Library for reading and writing primitive types to specific storage slots.
8  *
9  * Storage slots are often used to avoid storage conflict when dealing with
10  * upgradeable contracts.
11  * This library helps with reading and writing to such slots without the need for
12  * inline assembly.
13  *
14  * The functions in this library return Slot structs that contain a `value` member
15  * that can be used to read or write.
16  *
17  * Example usage to set ERC1967 implementation slot:
18  * ```
19  * contract ERC1967 {
20  *     bytes32 internal constant _IMPLEMENTATION_SLOT =
21  * 0x360894a13bala3210667c828492db98dca3e2076cc3735a920a3ca505d382bbc;
22  *
23  *     function _getImplementation() internal view returns (address) {
24  *         return StorageSlot.getAddressSlot(_IMPLEMENTATION_SLOT).value;
25  *     }
26  *
27  *     function _setImplementation(address newImplementation) internal {
28  *         require(Address.isContract(newImplementation), "ERC1967: new
29  * implementation is not a contract");
30  *         StorageSlot.getAddressSlot(_IMPLEMENTATION_SLOT).value = newImplementation;
31  *     }
32  * }
33  * ```
34  *
35  * Available since v4.1 for `address`, `bool`, `bytes32`, and `uint256`.
36  */
